QUADRILATERAL

06/05/2024 04:00PM

1. Parallelogram

समानांतर चतुर्भुजः

$$AC \neq BD$$

$$AB \parallel DC$$

$$AB = DC$$

$$AD \parallel BC$$

$$AD = BC$$

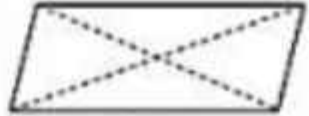

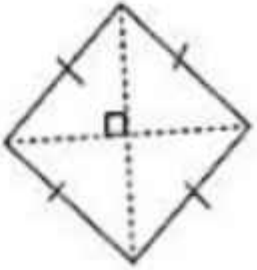

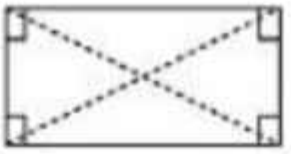

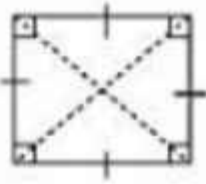

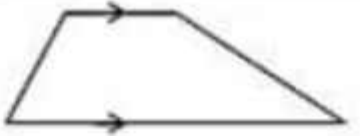

$$\angle A + \angle B = 180^\circ$$

$$\angle A + \angle D = 180^\circ$$

$$\angle B + \angle C = 180^\circ$$

2. PROPERTIES OF QUADRILATERAL

QUADRILATERAL	PROPERTIES
 <p>Parallelogram: A quadrilateral with each pair of opposite sides parallel.</p>	<ol style="list-style-type: none"> 1) Opposite sides are equal ✓ 2) Opposite sides are parallel ✓ 3) Opposite angles are equal ✓ 4) Diagonals bisect to each other
 <p>Rhombus: A parallelogram with sides of equal length.</p>	<ol style="list-style-type: none"> 1) All sides are equal ✓ 2) Opposite sides are parallel ✓ 3) Diagonals are perpendicular (tegak lurus) to each other ✓ 4) Opposite angles are equal 5) Diagonals are the angles bisector ✓ 6) Diagonals are line of symmetry
 <p>Rectangle: A parallelogram with a right angle.</p>	<ol style="list-style-type: none"> 1) All angles are right angle ✓ 2) Opposite sides are equal and parallel ✓ 3) Diagonals are equal and bisect to each other ✓ 4) It has 2 line of symmetry and 2 rotational symmetry
 <p>Square: A rectangle with sides of equal length.</p>	<ol style="list-style-type: none"> 1) All sides are equal ✓ 2) All angles are right angle ✓ 3) Opposite sides are equal ✓ 4) Diagonals are equal and bisect to each other at 90° (perpendicular) ✓ 5) Diagonals are bisector angle ✓
 <p>Kite: A quadrilateral with exactly two pairs of equal consecutive sides</p>	<ol style="list-style-type: none"> 1) The diagonals are perpendicular to each other 2) One of the diagonals bisects the other 3) One pair of angles are equal 4) 2 pairs of consecutive sides of equal measure. 5) It has two diagonal of different length
 <p>Trapezium : Trapezium is a quadrilateral with a pair of parallel sides</p>	<ol style="list-style-type: none"> 1) One pair of parallel sides

Rhombus (समचतुर्भुज):

All the sides are equal.

Diagonal bisect each other ($AO = OC$
 $BO = OD$)

$AC \neq BD$

Diagonal bisect at Right angle (90°).

$\angle A = \angle C$, $\angle B = \angle D$

$\angle A + \angle B = 180$, $\angle B + \angle C = 180$, $\angle C + \angle D = 180$

Diagonals are angle bisector.

वर्ग (Square) :-

$AB = BC = CD = AD$

$\angle A = \angle B = \angle C = \angle D = 90^\circ$

$AO = OC = BO = OD$

$AC = BD$

Diagonal are equal & Angle bisector.

Diagonal meets at 90°

आयत (Rectangle):

$AB = CD$
 $AB \parallel CD$

$BC = AD$
 $BC \parallel AD$

$\angle A = \angle B = \angle C = \angle D = 90^\circ$

$AC = BD$

$AO = OC, BO = OD$

TRAPEZIUM →

समलम्ब
चतुर्भुज

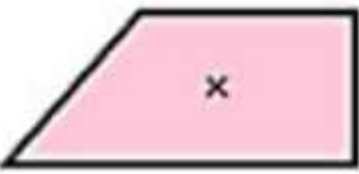

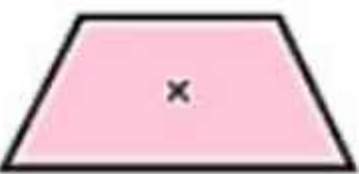

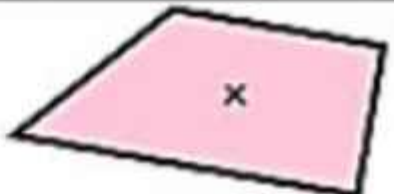

$AB \parallel CD$

Quadrilaterals

The Rotational Symmetry

when an object is rotated on its own axis, the shape of the object looks the same

Quadrilateral	Image	Order of Rotational Symmetry
Square		4
Rectangle		2
Parallelogram		2
Rhombus		2
Kite		1
Trapezium		1
Isosceles Trapezium		1
Irregular		1

Lines of Symmetry

Square

4 lines of symmetry

Rectangle

2 lines of symmetry

Rhombus

2 lines of symmetry

Kite

1 line of symmetry

Isosceles Trapezoid

1 line of symmetry

Trapezoid

No lines of symmetry

Parallelogram

No lines of symmetry

Equilateral Triangle

3 lines of symmetry

Isosceles Triangle

1 line of symmetry

Symmetry

Shapes divide into identical halves along an imaginary line

Lines of symmetry in Alphabets

4 pm-6pm

T T T

Quadrilaterals

Line Symmetry / Reflection symmetry : Lines of symmetry are straight lines that divide a shape into two equal parts where one part is an exact reflection of the other (The line of the fold is the line of symmetry)
