

DSS331GPART(A+B)

COMPLEX ANALYSIS

PART-11

Entire Function: A function f(z) is analytic in $\mathbb C$ is known as an/entire function

Analytic-Differentiable

(Gmplex)

Theorem -1 If f(z) & (z) are entire function then f(z) must be Constant Function& in this case $f'(z) = 0, \forall z \in \mathbb{C}$

Q. If p(z) & g(z) are non-zero polynomial s.t. p(z) g(z) is analytic in \mathbb{C} , then which of the following is/are true?

- (a) P(z) is constant polynomial
- (b) $\overline{p(z)}$ is constant polynomial
- (c) g(z) is constant polynomial
- (d) $\overline{g(z)}$ is constant polynomial
- (e) (c)&(d) Both true

Complex Analysis

Theorem -2 If f(z) = u + iv is analytic in \mathbb{C} & if $\operatorname{Re}(f(z))$ is Constant, then f(z) is constant function.

$$f(z) = U + iv$$

$$Re(f(z)) = U$$

Theorem -3 If f(z) = u + iv is analytic in (a) & if Im(f(x)) is Constant, then f(z) is constant function.

$$f(z) = U + iv$$

$$f(z) = u + i$$

- Q. Consider set $S = \{f \mid f(z) = 30 + \text{ iv &} f(z) \text{ is regular in } \mathbb{C}\&f:\mathbb{C} \to \mathbb{G}, \text{ then } f(z) \text{ is regular in } \mathbb{C}\&f:\mathbb{C} \to \mathbb{G}, \text{ then } f(z) \text{ is regular in } \mathbb{C}\&f:\mathbb{C} \to \mathbb{G}, \text{ then } f(z) \text{ is regular in } \mathbb{C}\&f:\mathbb{C} \to \mathbb{G}, \text{ then } f(z) \text{ is regular in } \mathbb{C}\&f:\mathbb{C} \to \mathbb{G}, \text{ then } f(z) \text{ is regular in } \mathbb{C}\&f:\mathbb{C} \to \mathbb{G}, \text{ then } f(z) \text{ is regular in } \mathbb{C}\&f:\mathbb{C} \to \mathbb{G}, \text{ then } f(z) \text{ is regular in } \mathbb{C}\&f:\mathbb{C} \to \mathbb{G}, \text{ then } f(z) \text{ is regular in } \mathbb{C}\&f:\mathbb{C} \to \mathbb{G}, \text{ then } f(z) \text{ is regular in } \mathbb{C}\&f:\mathbb{C} \to \mathbb{G}, \text{ then } f(z) \text{ is regular in } \mathbb{C}\&f:\mathbb{C} \to \mathbb{G}, \text{ then } f(z) \text{ is regular in } \mathbb{C}\&f:\mathbb{C} \to \mathbb{G}, \text{ then } f(z) \text{ is regular in } \mathbb{C}\&f:\mathbb{C} \to \mathbb{G}, \text{ then } f(z) \text{ is regular in } \mathbb{C}\&f:\mathbb{C} \to \mathbb{G}, \text{ then } f(z) \text{ is regular in } \mathbb{C}\&f:\mathbb{C} \to \mathbb{G}, \text{ then } f(z) \text{ is regular in } \mathbb{C}\&f:\mathbb{C} \to \mathbb{G}.$
- (a) If f(5 + 7i) = 30 + i93, then number of such function is unique
- (b) S is singleton set
- (c) S is uncountable set
- (d) (a) & (c) both true

$\mathbb{C}\&\quad \text{if}\quad |f(z)|=u+iv \text{ is analytic in}\\ \mathbb{C}\&\quad \text{if}\quad |f(z)|=\sqrt{u^2+v^2}=c \quad \text{(constant)}\\ \text{then } f(z) \text{ is constant function.}\\ \\ f(z)=3+4i$

Q. If $f: R^2 \to \{(x, y) \mid x^2 + y^2 = 100\}$ is differentiable everywhere & f(15,25) = (10,0) then f(10,0) =

Theorem -5 If f(z) = u + iv is analytic in $\subseteq \&$ if famp $f(z) = \tan^{-1}\left(\frac{v}{u}\right) = c$ then f(z) is constant function.

Theorem - 6 If f(z) = u + iv is analytic in \mathbb{C} & if a, b, c are non-zero real constant s.t. au + bv = c, then f(z) must be constant function.

unction.

$$au+bv=C$$

$$= f(z)=4+5i$$

$$5\times4+5\times5$$

$$= 45= conspir$$

h= 5

Theorem -7 If f(z) = u + iv is analytic in $\mathbb{C}\& \text{Re } (f(z)) = u(x,y) \geq 0; \forall z \in \mathbb{C}$ then f(z) must be constant function

Theorem -8 If f(z) = u + iv is analytic in $\mathbb{C}\& \text{Im } (f(z)) = v(x,y) \ge 0; \forall z \in \mathbb{C}$ then f(z) must be constant function

Theorem -9 If f(z) = u + iv is analytic in $\mathbb{C}\& \text{Re } (f(z)) = u(x,y) \leq 0; \forall z \in \mathbb{C}.$ then f(z) must be constant function.

Theorem -10 If f(z) = u + iv is analytic in $\mathbb{C}\& \text{Im } (f(z)) = v(x,y) \le 0; \forall z \in \mathbb{C}.$ then f(z) must be constant function.

Complex Analysis

Q. If one root of any equation is (2-3i) (where $i=\sqrt{-1}$), then what is the equation?

(a)
$$x^2 - 4x + 12 = 0$$

(b)
$$x^2 - 4x + 13 = 0$$

(c)
$$x^2 + 4x + 12 = 0$$

(d)
$$x^2 + 4x - 13 = 0$$

Q. Roots of the quadratic equation x^2 —

$$2ix + 3 = 0$$
 are:

- (a) 3i, -i
- **(b)** 3*i*, *i*
- (c) -3i, -i
- (d) $\pm 3i$

Q. Find the argument of this complex number $(1 + i)(\sqrt{3} + i)$:

$$\frac{1}{4} an(60-45) + \frac{1}{4} an(60+4an45) = \frac{1}{12}$$
 $\frac{1}{12} an(60-45) + \frac{1}{2} an(60+4an45) = \frac{1}{12}$
 $\frac{1}{12} an(60-4an45) = \frac{1}{12}$

(b)
$$\frac{12}{5\pi}$$

(c)
$$\pi$$

(d)
$$\frac{\pi}{4}$$

$$(J_3-1)+i(1+J_3)$$

$$0 = \frac{1}{\sqrt{3}+1}$$

$$\theta = \frac{\pi}{12}$$

Q. If ω be a cube root of 1, then what is the value of $(1-\omega)(1-\omega^2)(1-\omega^4)(1-\omega^4)$

- ω^5)?
- (a) 8
- (b) 7
- (c) 9
- (d) 1

Q. If $f(z) = |z|^2$, then

- (a) f is differentiable everywhere except 0
- (b) f is differentiable everywhere
- (c) f is differentiable nowhere
- (d) f is differentiable only at zero

Q. If $f(z) = |z|^2$, then:

- (a) f is continuous but not differentiable at 0
- (b) f is continuous and differentiable at 0
- (c) f is neither continuous nor differentiable at 0
- (d) f is discontinuous at 1

Complex Analysis

Algebraic Number: - A complex number is said to be Algebraic number if it satisfies a non-zero polynomial over Q.

Transcendental Number: - Non -algebraic numbers are said to be transcendental number.

Q. Which of the following numbers is an algebraic number?

A. π

B. *e*

 $C. \sqrt{2}$

D. ln (2)

Q. Which of the following statements is true?

- A, All transcendental numbers are algebraic.
- B. All algebraic numbers are transcendental.
- C. Some algebraic numbers are transcendental.
- D. No algebraic number is transcendental.

Complex Analysis

$$(1) |z-a|=r$$

(2)
$$|z - a| < r$$

$$(3) |z-a| \leq r$$

(4)
$$|z-a| > r$$

$$(5) |z-a| \geqslant r$$

Complex Analysis

Analytic Function or Regular Function or Holomorphic Function

Analytic Function:- A complex valued function f(z) is said to be analytic at point $z=z_0$ if $f'(z)=\lim_{\delta z\to 0}\frac{f(z+\delta z)-f(z)}{\delta z}$ exists & is unique at z_0

Analytic Function: A single valued function f(z) is said to be andytyic in a region R, if it is differentiableat each point of R.

(C-R-Equation | Cauchy Riemann Equation) For a function f(z) to be analytic in a region RNecessary: If f(z) is analytic at a point, then u and vmust satisfy the Cauchy-Riemann equations at that point. Sufficient: If u and v satisfy the Cauchy-Riemann equations and the partial derivatives of u and v are continuous, then f(z) is analytic in that region

Q. Let
$$f(z) = \frac{1}{z}$$
, $z \neq 0$, then

- 1. f does not satisfy Cauchy Riemann equation for all $z \neq 0$
- 2. f is continuous only but nowhere differentiable
- 3. f satisfies Cauchy Riemann equation, but not analytic for all $z \neq 0$
- 4. f is analytic for all $z \neq 0$,

Q. The Complex Function $f(z) = z^2$ is?

- (a) Analytic
- (b) Not analytic
- (c) May be analytic
- (d) None of these

Q. $f(z) = (|z|)^2$ is analytic or not?

- (a) Analytic
- (b) Not analytic
- (c) May be analytic
- (d) None

Q.
$$f(z) = 2xy + i(x^2 - y^2)$$

- (a) Analytic
- (b) Not analytic
- (c) May be analytic
- (d) None

 $\mathbf{Q.}\,f(\mathbf{z})=\mathbf{z}^3$

- (a) Analytic
- (b) Not analytic
- (c) May be analytic
- (d) None

Q.
$$f(z) = e^{-x}(\cos y + i\sin y)$$

- (a) Analytic
- (b) Not analytic
- (c) May be analytic
- (d) None

 $\mathbf{Q.}\ f(\mathbf{z}) = \sin\ \mathbf{z}$

- (a) Analytic
- (b) Not analytic
- (c) May be analytic
- (d) None

Harmonic Function

$$\mathbf{Q.}\; \boldsymbol{u} = \boldsymbol{x}^2 - \boldsymbol{y}^2$$

- (a) Harmonic function
- (b) Not Harmonic function
- (c) May be Harmonic function
- (d) None

Characteristics of Harmonic Functions in Complex Analysis

- 1.If f(z) = u(x, y) + iv(x, y) is analytic in a region R, then both u and v are harmonic functions in R.
- 2.If u(x, y) is harmonic in a connected region R, then u is the real part of an analytic function f(z) = u(x, y) + iv(x, y).
- 3.If u and v are the real and imaginary parts of an analytic function, then u and v are considered as harmonic conjugates.

- 4. The sum of two harmonic functions results in another harmonic function.
- 5. An arbitrary pair of harmonic functions " u " and " v " may not necessarily be conjugates, unless u+iv is an analytic function.

Q.
$$v = 3x^2y - y^3$$

- (a) Harmonic function
- (b) Not Harmonic function
- (c) May be Harmonic function
- (d) None

Q. $u(x,y) = x^2 - y^2$, find v(x,y)?

- (a) 3x + 2y + k
- **(b)** 2xy + k
- (c) $3xy^2 + k$
- (d) None

Q.
$$v(x, y) = 3x^2y - y^3$$
, Find $u(x, y)$

(a)
$$x^2 - 3xy^3 + c$$

(b)
$$x^3 - 2xy + c$$

(c)
$$x^3 - 3xy^2 + c$$

(d) None

Q. For analytic function f(z) = u + iv, if $u(x, y) = 3x^2 - 3y^2$, find v(x, y)

(a)
$$6xy + 3x^2 + c$$

(b)
$$6y - 6x + c$$

(c)
$$6x - 6y + c$$

(a)
$$6xy + c$$

Q. An analytic Function f(z) = u(x, y) + iv(x, y) if u = xy, find v

(a)
$$\frac{x^2-y}{2}+k$$

(b)
$$\frac{x-y^2}{2} + k$$

(c)
$$\frac{(x+y)^2}{2} + k$$

(d)
$$\frac{y^2 - x^2}{2} + k$$

Milne -Thomson Method

Construct Analytic function By Milne - Thomson Method

(1)
$$f(z) = \int (u_x)_{(z,0)} dz - i \int (u_y)_{(z,0)} dz + c$$
; if $u(x,y)$ is given

(2)
$$f(z) = \int (v_y)_{(z,0)} dz + i \int (v_x)_{(z,0)} dz + c$$
; if $v(x,y)$ is given

Q. If $u(x, y) = x^3 - 3xy^2 + 3x^2 - 3y^2$, Find Analytic f(z)?

(a)
$$z^3 - z^2 + c$$

(b)
$$z^3 + 3z^2 + c$$

(c)
$$3z^3 + z^2 + c$$

(d) None of these.

Q. $u(x,y) = x^3 - 3xy^2$. Find Analytic f(z)?

(a)
$$z^2 + c$$

(b)
$$z^3 + z^2 + c$$

(c)
$$z^3 + c$$

(d) None of these.

Q. $(x, y) = 3x^2y - y^3$. Find Analytic f(z)?

(a)
$$z^2 + c$$

(b)
$$z^3 + z^2 + c$$

(c)
$$z^3 + c$$

(d) None of these.

Q. Every holomorphic function is :-

- 1. commutative
- 2. analytic
 - 3. complex vector space
 - 4. complex

Q. What is the analytic region of $f(z) = (x - y)^2 +$

$$2i(x+y)$$
?

A.
$$x - y = 1$$

B.
$$x + y = 2$$

C.
$$x + y = -2$$

D.
$$x - y = -1$$

$$Ux = Vy$$

$$\mathcal{X}(x-y) = 21$$

$$\begin{array}{l}

Q. If f z is analytic function whose real part is constant then f z is......

A. Function of x and y both

C. Function of y only

D. Function of
$$x$$
 only

of x only
$$\int (z) = \bigcup iv \quad U \text{ is Constant then} \\
U_x = O = V_y \quad U_x = V_y \quad \exists U. \quad -1/2$$

$$O = 0$$

Q. Does C-R equations are necessary and sufficient for a function to be analytic?

A. depend on range of functions

B. FALSE

C. TRUE

D. can't say about nature of equations
